

Data request

To build a churn prediction model we will need data from STADIOchoice that allows us to understand subscriber behaviour, engagement, payment patterns, content consumption, customer service interactions, and historical cancellations.

Dataset 1: Subscriber data

Column Name	Data type	Example	Additional information
Subscriber ID	String	Sub1432	It is a unique customer identifier
Subscription type	categorical	streaming	Streaming, satellite, hybrid
Subscription status	categorical	active	Active, cancelled, suspended, trial
Converted to paid	Boolean	yes	Shows whether a customer converted from trial to subscription
Churn status	Boolean	yes	Shows whether a customer churned
Sign up date	Date	2026-01-03	Date the subscription started
Churn date	Date	2026-09-03	Churn date
Acquisition channel	String	Facebook ad	Marketing source used for acquisition

Dataset 2: Subscription & Billing history

Column name	Data type	Example	Additional information
Subscriber ID	String	Sub1432	It is a unique customer identifier
Billing date	Date	2026-01-01	Monthly billing date
Plan name	string	Premium plus	Package subscribed to
Monthly fee	Numeric	499	Monthly subscription fee
Payment status	categorical	successful	Successful, failed, reversed
Payment failure count	integer	2	Number of payment failures in previous 12 months

Downgrade flag	Boolean	yes	Indicates subscription downgrade
Auto renewal	Boolean	yes	Indicates auto renewal status
Retention outcome	Categorical	retained	Retained or churned
Cancellation request date	Date	2026-04-01	Date cancellation was requested
Tenure	numeric	765	Duration of subscription

Dataset 3: Streaming viewing activity

Column name	Data type	Example	Additional information
Subscriber ID	String	Sub1432	A unique customer identifier
Watch duration	numeric	52	Minutes watched
Days since last watch	Numeric	5	Calculated metric if available
Type of content being watched	Categorical	sports	The kind of content being used
Device type	Categorical	Mobile	Mobile, TV, tablet

Additional requirements

The data provided must be at least 36 months of historical data to capture behavioural trends and seasonality.
